02

What you'll need

Cable Installation Note

Power requirements: 12 Volts DC +/- 5% and 250mA **at the endpoint** (IoT Sensor) is required.

We advise not only selection of the right gauge and power quality, but integrators should confirm the power delivery is sufficient by checking power at the endpoints. If existing cable is of higher gauge / lower capacity and cannot be replaced, Safetrust sensors are designed to operate at up to 24VDC.*

As a result, higher voltage at the power source is safe to use with IoT Sensors if the source and wiring implementation can safely support it and if it is compliant with local code.

** Safetrust recommends against using the same 24V power supply for both locks and IoT Sensors.*

Power cable:

- 18/2 for distances < 500 ft.
- 16/2 for distances < 700 ft.
- For distances up to 1000', see Cable Installation Note above.

Data cable - Wiegand:

- Cable, 5-12 conductor, 4 conductor Twisted Pair Over-All Shield and UL approved (<500ft)

Data cable - OSDP:

- Belden 6381MD - 1Pr 24AWG Shielded Data + 18/2 Power OSDP CMP or equivalent (<500Ft)
- Belden 6281MD - 1Pr 22AWG Shielded Data + 16/2 Power OSDP CMP or equivalent (<700Ft)

Tools and Supplies:

- Drill with various bits for mounting hardware
- Additional tools and supplies as needed to connect sensor wires to associated system cable

03

Installation

Wire Colors

Ground	●	Black
Relay In*	●	Grey
Relay Out*	●	Blue
Red LED	●	Brown
Tamper	●	Purple
Green LED	●	Orange
Wiegand D0/Data	●	Green
Wiegand D1/Clock/F2F	○	White
12VDC	●	Red
OSDP TX+ / RS-485(A) / D0	●	Aqua
OSDP TX- / RS-485(B) / D1	●	Pink
Beeper	●	Yellow

*Low voltage

The first step is to connect the system wiring from the wall to the IoT Sensor. See the wiring table above.

For a wall mounted installation, begin by pre-drilling your holes and insert the nylon wall plugs provided to support the weight of the reader. Once secured, you can fix the IoT Sensor to the wall using the Phillips sheetmetal screws (#6 x 1.5") provided.

The top cover can then be fixed over the IoT Sensor as shown above.

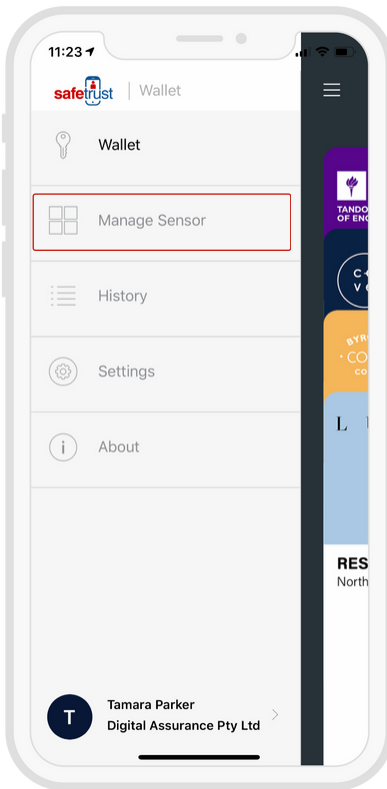

Complete the hardware installation by fixing the screw (#6-32 x .375" Phillips flat head screw) through the base of the reader.

04

Configuration

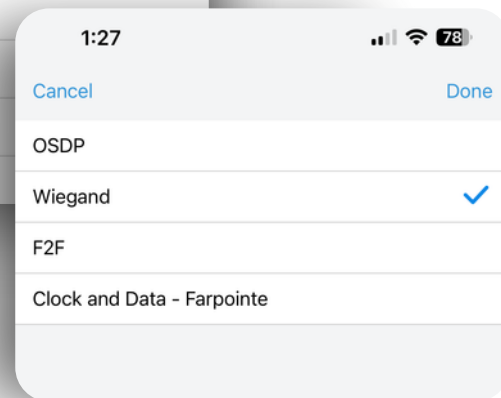

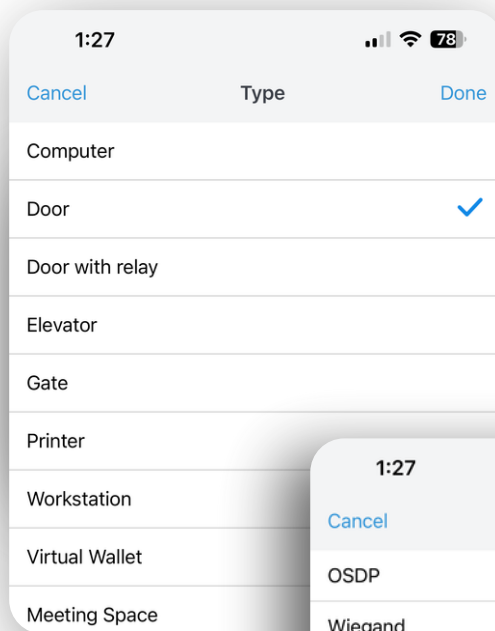

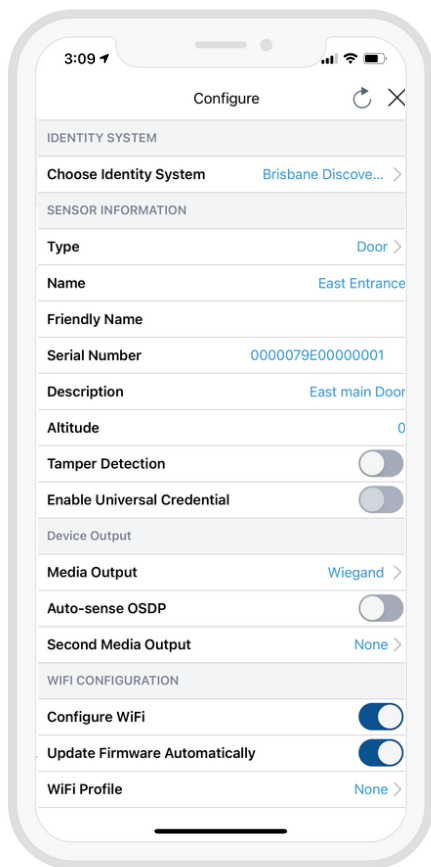

Open the Safetrust Wallet App and select the Manage Sensor tab from the navigation. Make sure your system administrator has set you up with a role that has rights to configure a sensor.

With the Manage Sensor tab open, bring the phone in range of the IoT Sensor and once visible from the App, highlight and select the “Configure” button.

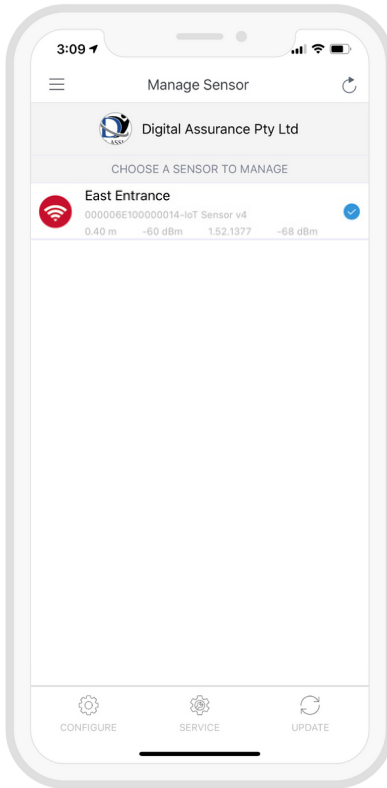

1. Choose an Identity System*.
2. Specify the Type of access from the dropdown (eg. Door, Gate etc.)
3. Assign a short Name and Description using alphanumeric characters.
4. Choose a Media Output for the sensor (the default is set to Wiegand).

**Note: Identity System must be previously created in the Safetrust Credential Manager portal by a system administrator.*

When the IoT Sensor information is saved successfully to Credential Manager and assigned to the Identity System, the new name will appear in the Manage Sensor tab with a unique serial number assigned.

05

Testing

Access with cards

Status LED

Solid red
Indicates idle mode

Flashing red, blue, green
Power up mode

Flashing green
Card credential is read
and transmitted
through designated
wires

Access with Mobile – BLE

Status LED

Solid red

Indicates idle mode

Flashing red, blue, green

Power up mode

Solid Blue

Mobile credential
detected

Flashing green

Mobile BLE credential is
read and transmitted
through designated wires

Access with Mobile – NFC

Status LED

Solid red

Indicates idle mode

Flashing red, blue, green

Power up mode

Flashing green

Mobile BLE credential is
read and transmitted
through designated wires

06

Regulatory Information

FCC: This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Canada Radio Certification: This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

CE Marking: Safetrust hereby declares that these proximity readers are in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

07

Support

Thank you for purchasing the Safetrust IoT Sensor Mullion.

If for any reason you need assistance with your installation, please contact your local Sales representative .

Sincerely -
The Safetrust Team
